Letter from our founder

Pietro Pasolini
CEO of Green Future Project

“ ”

I first experienced the destructive power of deforestation on a trip to Ecuador in late 2019. Witnessing the tragic loss of biodiversity caused by commercial logging was a life changing experience, one I could not walk away from.

A year later Green Future Project was born with the mission of harnessing the power of collective action globally to fight climate change. In less than 2 years we have built and grown an international and diverse organisation that supports 13 climate projects across 4 continents.

The great results that we are presenting in this report could have never been achieved without the superb passion and hard work of the GFP team, our project partners and YOUR support. So thank you for being part of the Green Future Project movement and supporting us as we push to protect the world's biodiversity and slow down the pace of climate change.

No doubt, we are just getting started.

Up next:

[Who we are >](#)

Who we are

Green Future Project has been established to simplify climate action.

Born in 2020 to save Tropical Rainforests in Ecuador, it is now a tech enabled platform scaling up positive environmental impact at a global level.

Restoration, Preservation, Renewable Energy and Marine Restoration are our core activities to fight climate change, harnessing the power of collective action.

If you need help or want to say hi, contact us at info@greenfutureproject.com

[Why and how we do it >](#)

Why and how we do it

Green Future Project aims to reverse the effects of climate change, bridging people and businesses with the best climate solutions all over the world.

The problem

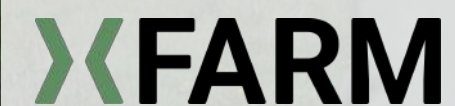

The climate crisis is severely affecting the most precious ecosystems on this planet. In addition to that, deforestation represents 23% of global CO2 emissions and is threatening the Amazon at an incredible and worrying pace.

The impact of our projects

To properly track and monitor the impact of our projects, we partner with Orbify and X Farm, providing you with satellite images and live data from the sites.

The experience we provide

These live data and images enable us to have real time information about the status of the projects, making the user experience an all-round one.

The logo for Orbify, featuring the word "orbify" in a lowercase, blue, sans-serif font.The logo for X Farm, featuring a green stylized 'X' followed by the word "FARM" in a bold, black, sans-serif font.

Increasing engagement and awareness is key to make impact at scale.

Partners & achievements

During 2022, Green Future Project have reached some milestones, not only in relation to projects and impact.

B Corp Certification, CO2alizione Italia membership and Invest Conservation are just few of the extended network of strategic partners we have broadened so far. Being able to create synergies with companies we share values and mission allows us to **power a virtuous circle towards a real, sustainable world.**

In addition, Green Future Project has been awarded with the Best In Governance Award, being thus recognized as a leading company for the best Governance practices.

Partnerships

Events

In 2022, Green Future Project attended several events and conferences, expanding our network of like-minded companies and having the opportunity to **inspire and getting inspired** by other realities all over the world.

We became partners of some of the most important companies in the **sustainability sector**, from **certification** ones to **accelerator programs**.

Fundación Jocotoco

In July, we had the chance to interview the Park Rangers of Fundación Jocotoco.

Jhuly Diaz, Mario Bulaño, Diego Velasquez and Franco Mendoza shared with Green Future Project the meaning of being a Park Ranger, their daily life at the Fundación and the values that guide their incredible work in the reserves.

< [People of the planet](#)

Alligator Head Foundation

In June, in collaboration with our partner Alligator Head Foundation, we held two Live-Interviews on our Instagram channel.

Denise Henry, Marine Biologist and Research Program Manager of Alligator Head Foundation, guided us into the daily life at the Foundation and provided us information about the importance of coral reefs regeneration and endangered sea turtles.

Company Culture

Our core values reflect those of a business started by a group of friends which felt the urge to act to protect our planet

As a community led business we believe that collective action is the key. That together we are stronger and that a small action is better than no action at all. We are firmly convinced that if you are not actively fighting climate change then you are ignoring the most relevant problem of our generation and maybe you ought to re-think your priorities. We know that change is possible and believe that many will take part in this global push if provided with the right equipment: we are here to create those tools and democratise the usage.

We think big because if the problem is huge the solution must be bold. We are change makers and as such we are unafraid to question the status quo, to go against the tide, to take on the challenge of rethinking and reinventing the only thing we all share in common: our future.

Pietro Pasolini - CEO of Green Future Project
